Select from these Early Maturity and Full Season Hybrids

Scott's
11
T. M. SIG.

90-95 DAYS

A top producer in its class.

Ears are extra large with solid, sound, dark yellow kernels that make excellent feed. A clean picker with easy husking and quick drying qualities for early cribbing. Stalks are dark green, medium size, have good standing ability.

For yield and quality you can't beat Scott's 11.

Scott's
99
T. M. SIG.

120 DAYS

A fast, vigorous grower developing good roots and sturdy stalks—exceptional resistance to disease and drought. Ears are large and deep kerneled with clean picking and fast drying characteristics. One of the best all-around hybrids yielding high tonnage silage and good quality crib corn.

You'll come back for more Scott's 99.

Scott's
33
T. M. SIG.

100 DAYS

This handy size hybrid is bred for resistance to disease, smut and borer. Has a record of outyielding everything in its class. Ears are sound and easy to husk with dark, deep kernels. A clean picking, good crib corn that many customers ask for year after year.

Try Scott's 33 for good 100 day corn.

Scott's
75
T. M. SIG.

115 DAYS

A proven high yielder that readily adapts to a wide variety of soil and climate conditions. Medium tall, leafy stalks that resist blight and wind damage. Handy size, clean picking ears well adapted to mechanical harvesting. An excellent crib corn that produces good ensilage as well.

For a sure yield — plant Scott's 75.

Scott's
66
T. M. SIG.

105 DAYS

Another favorite high producing crib corn that starts fast and possesses good blight and rot resistance. The medium ears are deep kerneled and not subject to dropping. It's a clean, fast drying hybrid for field picking and hand husking. Also produces an excellent fodder for ensilage.

You'll find Scott's 66 one of the best.

Scott's
72
T. M. SIG.

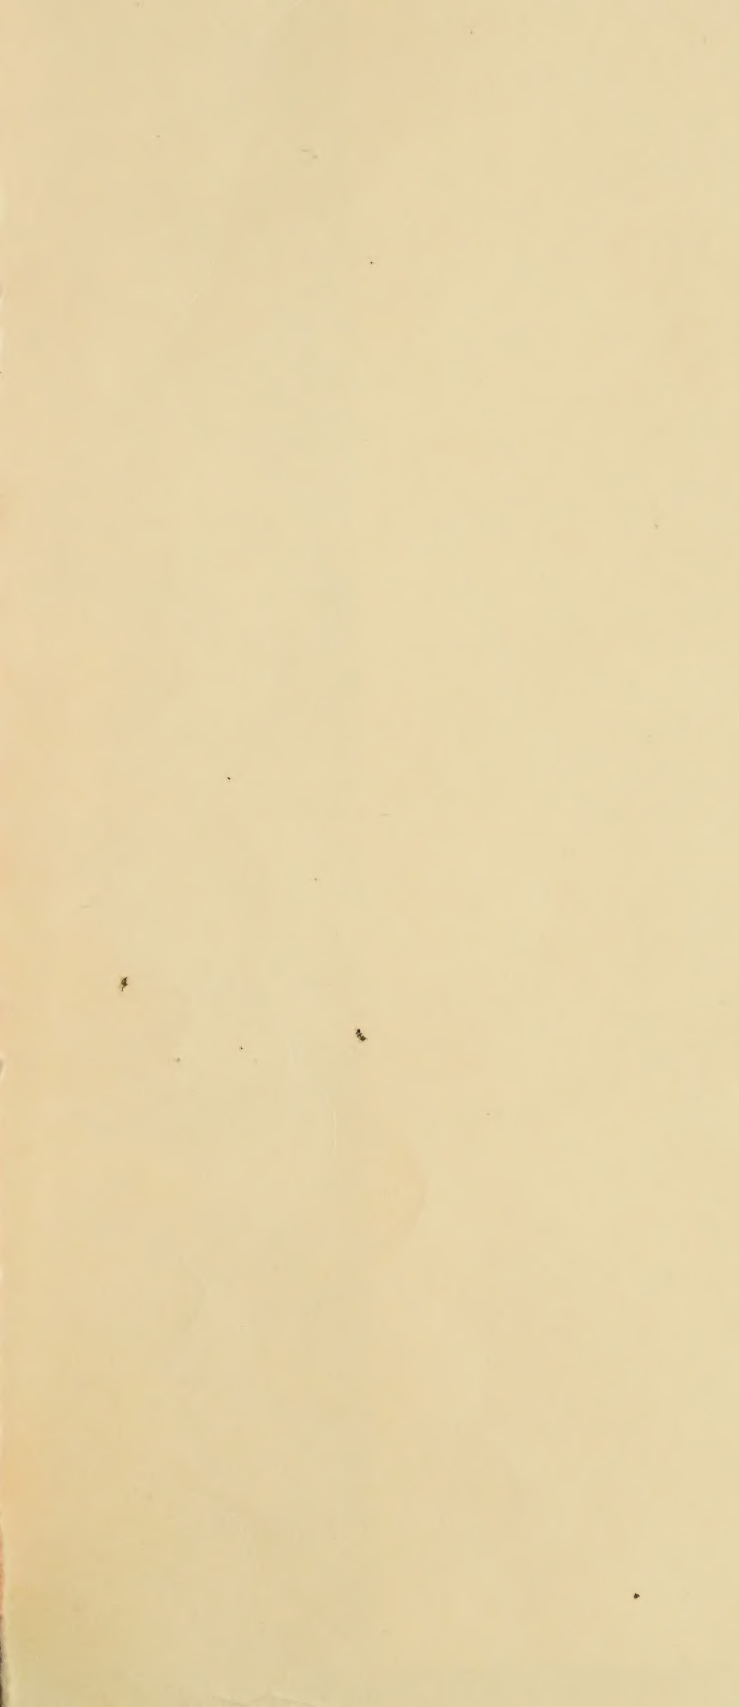

110 DAYS

Popular as the main corn crop on many farms because it can usually be followed with wheat. Stalks are medium tall and have better resistance to rot and blight than most hybrids in this class. An excellent crib corn with showy, clean picking ears that carry deep, dark yellow kernels.

Scott's 72 will give you lots of good corn.

Scott FARM SEED COMPANY, Mechanicsburg, Ohio

HERE'S PROOF of *Scott's* Consistent Quality

T M REG

I was very well pleased with Scotts 11. Its yield was higher than some other hybrids of the same maturity and it stands the dry weather well.

D.E.B., Archbald, Ohio

Scotts 99 is a good hybrid for this section. It showed the least damage from borer of any varieties around here and I didn't have two dozen mouldy ears in the whole field. I especially like it because it shells so easily.

F.D., Forest Grove, Pa.

I prefer Scotts 75 for good yields. It seems to start off faster than other corn. Scotts seed is the best I have ever used and I will continue using it as long as I farm.

E.M., Wolf Creek, W. Va.
